Jacquard acid dyes instructions

Safety:

- May irritate the skin or eyes.
- Avoid eye contact, wear rubber gloves and suitable mask.
- Breathing dust may be harmful.
- Keep out of reach of children.
- Utensils that have been used for dyeing should not be used in food preparation.

Stove top method:

- 1- Fill a stainless steel or enamel pot with just enough hot or warm water for the fabric to swim freely, turn on the heat.
- 2- Add the dye powder to the pot and stir. Normally, in this procedure you would add 2 to 4% of the dry weight of the fabric in dye powder. For example, if you are dyeing 1 pound of fabric, use 1/3 to 2/3 of an ounce of dye.
- 3- Add the fabric that has been thoroughly wetted to the dyepot.
- 4- Raise the temperature to 185 to 200 degrees, just below boiling. Stir frequently.
- 5- Add 1/4 cup of vinegar per pound of fabric. Try not to pour directly onto the fabric. Or add 1 Tbs. of Citric Acid per lb of dry fabric if you don't like the smell of vinegar.
- 6- Maintain temperature and stir frequently for 1/2 hour. Wash in Synthrapol® or Professional Textile Detergent and warm water.

REMARQUE: If you are dyeing wool, a gradual heating and gradual cooling of the dyebath is important so as not to shock and felt the wool.

Dye Quantities Chart:

The quantities listed are for the deepest color saturation in one pound of fabric. For pastels and lighter colors, use less dye.

.25 to .5 ounces

600 Ecru
601 Yellow Sun
602 Bright Yellow
603 Golden Yellow
605 Pumpkin Orange
607 Salmon
608 Pink
636 Gold Ochre
638 Silver Grey

.5 to 1.5 ounces

604 Burnt Orange
610 Burgundy
620 Hot Fuchsia
627 Kelly Green
628 Chartreuse
633 Aztec Gold
634 Olive

1.5 to 2 ounces

606 Deep Orange 622 Sapphire Blue
609 Scarlet 624 Turquoise
611 Vermillion 625 Royal Blue
612 Lilac 629 Emerald
613 Purple 630 Spruce
614 Violet 631 Teal
615 Periwinkle 637 Gun Metal
